SUMMARY

Designer and frontend developer who takes products from Figma to deployed code - with additional exposure to AI integration and data-driven design. Strong foundation in visual storytelling, interaction design, and building interfaces that are both functional and visually compelling.

SKILLS & CERTIFICATIONS

- **Design & Creative Tools:** Figma, Canva, Adobe Photoshop, Adobe Illustrator, UI/UX Design, Interaction Design
- **Web & Front-End:** HTML, CSS, JavaScript, React.js, Responsive Design
- **Tools:** Git, MySQL, Flask, Applied AI (Gemini API), MS Excel, Power BI, Notion
- **Certifications:** Front-end Developer Capstone, Introduction to Front-End Development, Fundamentals of Graphic Design, Hands-On Data Visualization with Microsoft Power BI

PROFESSIONAL EXPERIENCE

OptiPhoenix — *Graphic Designer* *Remote | May'26 - Present*

- Led the end-to-end redesign of the company website, restructuring the information architecture and merging scattered content into one clear brand narrative.
- Designed and shipped conversion-focused landing pages and branded reports for client campaigns, building color and layout systems directly from each client's brand assets.
- Built a reusable design system (typography, color tokens, layout patterns) for the monthly newsletter and social calendar, so every issue and post ships consistently and faster.
- Produced marketing creatives - LinkedIn carousels, recognition posts, and campaign visuals combining coded (HTML/SVG) and traditional design workflows to move faster without sacrificing polish.

Indie Product Builder — *Self-directed* *Remote | Nov'25 - Present*

- Defined product vision, user personas, and OKRs for products including AdmitSync, ELI5, and FitAI; scoped and prioritised MVP features using RICE framework, wrote PRDs and user stories with clear acceptance criteria before any development began.
- Conducted 10+ user interviews across AdmitSync and ELI5 to identify unmet needs; synthesised findings into journey maps, problem statements, and a prioritised backlog; deprioritising lower-impact features to protect launch timelines.
- Owned full product lifecycle - discovery, wireframing in Figma, usability testing with ~15 users, and post-launch iteration reducing navigation friction by ~25% across products.

Learning Routes — *Management Trainee* *Gurgaon | Jun'25 - Aug'25*

- Tracked the end-to-end sales pipeline via CRM and Excel; identified funnel drop-off patterns and presented data-driven findings to senior managers, leading to process improvements adopted by the team.
- Prepared weekly reports on client interactions and lead conversions, directly informing decision-making for senior managers.

PROJECTS

FitAI - AI-Powered Personalized Fitness Platform

- Conceptualized and designed a responsive fitness planning interface (notion) centered around clarity, motivation, and structured progression.
- Developed a clean visual system with consistent spacing, typography, and hierarchy to guide users from onboarding to plan generation.
- Simplified goal selection and onboarding by restructuring the layout and reducing interaction friction.

LearnSign - AI Sign Language App

- Designed a playful, gamified interface for young learners with visual reward elements, accessible color usage, and intuitive iconography.
- Iterated interface based on usability trials, improving clarity and reducing drop-off through better interaction cues.

SHUSH • Demo

- Designed a calm, approachable visual identity for sensitive health content - soft color palette, clear hierarchy, and intuitive navigation reduced friction in a high-empathy context.
- Refined UI spacing and aesthetics through mentor feedback loops, shipping a cleaner, more readable interface.

EDUCATION

Arya College of Engineering and I.T, Jaipur, B.Tech, Computer Science, **CGPA: 8.5/10** *2021-2025*
